

Why Choose a *Water Factory Systems Reverse Osmosis System?*

I have been a **Water Treatment Systems Dealer since 1983**, and during this time I have sold, installed and/or serviced numerous different Reverse Osmosis System *Brands & Models* — thousands of times over the years.

Based on the thousands of systems I have installed and serviced over the years, when it comes to Design, Installation, Servicing, Warranty, and Reliability of Components, Fittings & Parts the *Water Factory Systems Reverse Osmosis Systems* are superior to all the rest. Below are some of the reasons why.

-Michael F. Gold
President
AAA BestWater Co.

SIMPLY THE HIGHEST QUALITY DRINKING WATER BY THE BEST DESIGNED SYSTEM IN THE INDUSTRY:

- The Water Factory Systems SQC Reverse Osmosis Series provides the most complete and compact online filtration package.
- NEAT AND SLIM. The SQC patented Sanitary Quick Change cartridges provide easy replacement, with no tools and no spills. You just twist them in or out. The System's compact size allows you to put it easily under a kitchen sink.
- The SQC Series is tested and certified by NSF International and may be used on municipal and private water supplies.
- SIMPLY GREAT PERFORMANCE. The SQC 3 and 4 Systems combine premium depth filters with high performance carbon and a Reverse Osmosis Membrane for unsurpassed performance in eliminating unwanted contaminants from drinking water.

WARRANTY: **Water Factory Systems** gives a **10-YEAR Warranty** on the entire Reverse Osmosis System — **the best in the industry**

PRODUCT MANUFACTURER, WARRANTY & SUPPORT: **Water Factory Systems** is a Division of **Cuno**, which has been around since 1912, and **Cuno** is now a Division of the **3M Company**.

Cuno: Today & Tomorrow CUNO is a world leader in the design, manufacture, and marketing of a comprehensive line of filtration products for the separation, clarification, and purification of fluids and gasses. Its proprietary products include uses in the healthcare, industrial, and drinking water markets. The Company operates a total of eight manufacturing facilities in the United States, Europe, Japan, Brazil, and Australia, and has sales offices throughout the world. The need for filtration is estimated at nearly \$3 billion worldwide, and filtration markets are currently growing at a rate of 7 to 8 percent annually.

A History of Ingenuity: CUNO was the surname of the company founder, Charles Cuno, who began manufacturing operations in 1912 for a variety of products, primarily for automobiles, in Meriden, Connecticut. The Company grew and developed new products for filtration that included engine and hydraulic metal filters. Filtration and separation became the primary focus during the 1960's through 1980's. From 1986 to 1996, CUNO was the Fluid Purification business of Commercial Intertech. In September of 1996, CUNO Incorporated became a publicly listed company (NASDAQ: CUNO). On August 1, 2005, CUNO was acquired by 3M. By combining the advanced materials innovation of 3M with the separation and filtration experience of CUNO, new solutions are provided to customers worldwide. CUNO and **3M** -- bringing two great companies together!

COMPONENTS:

Storage Tank: **Water Factory Systems** provides a **Plastic Tank** that **won't corrode and leak** and **takes up less space, with a 10-YEAR Warranty**. Other systems have a **Metal Tank** that **can corrode and leak** and takes up more space, with a very short warranty.

Manifold Design: **Water Factory Systems** has a **single compact manifold that handles all the water lines-(water Inlet, water to storage Tank, Water to Faucet) and water to Cartridges; water to drain comes directly from the Membrane Cartridge — this makes the System the most compact System on the market, all with a 10-YEAR Warranty**.

Cartridges: **Water Factory Systems** **does not use Cartridge Housings—not even for the Membrane**. It has a simple *twist-in* and *twist-out* bayonet cartridge — called **SQC** for **Sanitary Quick Change**. Bayonet mount cartridges can be changed easily without tools, spills or mess. Sealed filter provides optimum protection against hand contamination to ensure high-purity drinking water. With the **Water Factory Systems** there are no housing O-rings to leak or change. **There is no need to do any of the following:** Use a spanner wrench to open a cartridge housing—take out the old cartridge—clean the housing—change an O-ring—put a cartridge into the housing—put a sanitizing solution into the housing—tighten the housing back on the housing cap.

Fittings: **Water Factory Systems** **uses John Guest Fittings in the system, and less fittings than other systems**. In my experience, it has been extremely rare that these fittings have leaked, even servicing systems that are over 12 years old. If the fitting should leak, you simply change the John Guest **fitting 1/4" or 3/8" O-ring**.

With many other systems, it has been my experience, that it has been very common for their fittings to leak when changing filters, I've had this problem with some systems just 1 to 2 years old. Some systems do not provide O-Rings for their fittings, so I have to order new fittings when they leak, and removing and re-installing these fittings are more difficult to deal with. **The most common problem I have with some other Systems — it seems that when the system sits under the sink for the year and you then move the system around during the filter change, that is when the fittings start to leak — they're not leaking before you move things, but start leaking after you move something—typical in my experience.**

The world's most advanced purification

technologies in a compact, convenient package for all of your drinking and cooking needs. Give your family the clean, healthful and fresh-tasting water they deserve with a Water Factory Reverse Osmosis Drinking Water Appliance.

QUALITY, PERFORMANCE AND CONVENIENCE YOU CAN COUNT ON.

ULTIMATE CONVENIENCE

- Clean, refreshing, great-tasting water at your fingertips...not from the bottle.

SUPERIOR EFFECTIVENESS

- Reverse Osmosis combined with premium Activated Carbon technology reduces up to 99% of unwanted impurities and eliminates bad taste and odors for sparkling clear water.

HIGH PERFORMANCE

- Maximized output produces a plentiful supply of water for all drinking water and cooking needs.

TOTAL TREATMENT

- Multiple advanced filtration technologies provide complete treatment of chlorine, taste and odors, dissolved solids, cysts, sodium and heavy metals in your drinking water.

NSF INTERNATIONAL CERTIFIED AND LISTED

- Quality and performance tested by an independent, nationally recognized laboratory for your complete confidence.

Refreshing, flavor enhanced beverages.

Robust, great-tasting coffee or tea.

Sparkling, crystal clear ice cubes.

ENGINEERED TO MEET THE DEMANDS of today's household needs

and family lifestyles, the Water Factory Reverse Osmosis Drinking Water System combines the latest in contemporary styling with compact, high-performance design.

SPACE-SAVING DESIGN:

Compact design fits easily under your sink leaving ample room for additional storage.

DESIGNER LONG REACH FAUCET:

Conveniently delivers delicious, clean water at your fingertips.

HIGH-CAPACITY RESERVOIR TANK:

Extra large 2.0 gallon storage tank ensures an abundant water supply.

AUTOMATIC SHUT-OFF VALVE:

System shuts-off when tank is full for optimal water conservation.

STATE-OF-THE-ART DRINKING WATER SYSTEM

Combines four filters for unsurpassed performance.

PREMIUM PERFORMANCE GRADED DENSITY PREFILTER:

Removes sediment, dirt and other particles 8 times smaller than you can see.

HIGH EFFICIENCY ACTIVATED CARBON PREFILTER:

Reduces chlorine and other unpleasant tastes and odors.*

REVERSE OSMOSIS TECHNOLOGY:

Uses semi-permeable membrane to divert dissolved salts, metals, chemicals, micro-organisms and other impurities to drain.

HIGH PURITY CARBON POSTFILTER:

Polishes water to ensure fresh tasting, crystal clear water.
